

# UK - Hawes Junction

Hawes Junction is a small part of the renowned 72 mile long Settle and Carlisle Railway. The line is located in one of the most remote and picturesque areas of England.

A range of era's are modeled with activities that include steam and modern diesel. Included are a "Fowler 4F BR" Steamer and Class 37 locomotive as well as a set of Mk1 coaches and a selection of goods stock. All these items are of high quality and include such features as opening doors, selectable liveries, animated couplings and, in the case of the Class 37, a fully functional AWS system.

Hawes Junction was created by Rail-sim.co.uk, a group from a selection of some of the most respected creators of content for the UK scene, all of which have been supplying quality content to the Trainz community for a number of years.

During the creation of the route, the team has been assisted by ex-railwaymen who spent their working lives running up and down the route to ensure authenticity.

Rail-sim.co.uk intend to completely model the entire Leeds-Settle-Carlisle Railway line.
