# Modula City - Modula City 2004 Demo

Modula City is a beautiful living, breathing city set in a fictional setting with a slightly tropical theme. Watch as the sun sets on this stunning urban vista and the city nightlife kicks into gear. At night buildings have lit windows, advertising boards are shining in bright colors, monuments are illuminated, and hundreds of street lights make the flair of this modern metropolis perfect.

This route gives you a taste of what is available from the creators at Trainzland.

The Modula City Demo contains an articulated tram set using the GT6 trams, which can be found in the real world in the German town Brainschweig, and were built in 1981. This demo allows you to create your own Tram routes through Modula City.

Modula City has been continually growing for 2 years, and the authors at Trainzland are currently working on Modula City V2 which boasts a number of exciting new features never before seen. Modula City V2 will be available exclusively for Trainz 2006.

Best Features:
•   Beautiful living breathing city in a tropical setting
•   Detailed urban environments
•   GT6 articulated tram set with opening doors and a variety of passengers
•   Watch as the sun sets and the city nightlife kicks into gear!
